PATIENT MONITORING & CONNECTIVITY
Enterprise Performance Plus

Simplifying the
flow of data

Enterprise Performance Plus

A full suite of enterprise software supporting the operational and clinical needs of your care team. All as one solution.

Spacelabs Enterprise software enhances your monitoring equipment with tools and features that drive clinical and workflow efficiencies while enhancing patient safety. It brings your data together for easy analysis and offers a suite of comprehensive reports which facilitate and document caregiver communications.

• Xprezzon®

Ultra-configurability to support the clinical requirements of high acuity patients - adult, pediatric, neonatal, and perioperative.

Qube®

Designed with portability and viewability in mind, at bedside or during transport.

Qube® Mini

Delivering the capabilities of Xprezzon and Qube in a smaller package; full set of parameters, same user interface.

AriaTele™

Advanced medical telemetry dynamically analyzes the best leads resulting in superior arrhythmia and ST monitoring.

Xhibit™

Centralized surveillance for up to 48 patients; configurable with up to four high-resolution displays for detailed views of any patient on the network.

SafeNSound™

Access near real-time data on PCs or smart devices, with the ability to create a suite of on-demand reports to drive quality improvement. In addition, utilize comprehensive data analysis tools to safely direct clinical care.

Intesys® Clinical Suites (ICS)

Full disclosure review with Holter-like analysis. Integration to all major charting systems including Cerner, Epic, McKesson, and IMD-Software via HL7.

XprezzNet

Provides fast delivery of actionable data, simplified and scalable.

Care Team Performance: TeamUp Strategies

Spacelabs pioneered medical telemetry and innovations in patient monitoring, and continues to offer solutions that do more to help you provide the experience your patients expect while helping you manage your resources to meet today's realities. From strategic planning through post-installation support, count on Spacelabs TeamUp strategies experts, products and services to help you achieve your care team performance goals.

Project Management and Implementation

Our mission is to ensure the successful implementation of your Spacelabs system. Our team will help you prepare for planning, installing, testing, training and using your system.

This Includes:

- Defining project team members as well as roles and responsibilities.
- Specifying key deliverables and ownership.
- Outlining high-level project tasks, as well as key technical and clinical requirements for implementation.

Clinical Education and Go-Live Support

Accelerate your care team performance by collaborative tailored learning to meet your clinical requirements, workflows, and organizational goals. Flexible learning options include one-on-one education and go-live support. Post go-live support options include consultative clinical support to maximize use of your Spacelabs products, as well as access to our e-learning platform. On-call clinical and technical support available 24/7.

Software Updates

Feature and improvement updates will be made available at no charge as released.

With you all the way.

As healthcare organizations increasingly seek technology that facilitates evidence-based, data-driven decisions, caregivers are turning to Enterprise Software. Spacelabs Enterprise Performance Plus Suite offers much more than alarm management and reporting, with real-time reports on communications and throughput management as well as detailed retrospective information on patient events, providing valuable insights to care team members.

If you are interested in learning more about our Enterprise Performance Plus Suite, please contact us at 1-800-522-7025. We can arrange an on-site discussion or video conference at your convenience.
