## TRANSMISSION INTEGRITY (TXIG)

The ability of the device to ensure the integrity of transmitted data.

TXIG-1	Does the device support any mechanism (e.g., digital signatures) intended to ensure data is not modified during transmission?	Yes	All communications between the Spacelabs monitoring devices and ICS occur over TCP/IP and/or UDP protocols. These protocols have built in checksum mechanisms. Additionally, TCP protocol also provides relibale data delivery by packet sequence numbering, message acknowledgement capabilities. There are no data integrity checks for the stored data at the Smart Disclosure application layer.
